

# Meters

Available in 48, 72, 96 and 144mm<sup>2</sup> analogue type.

Ammeters, Voltmeters, Frequency Meters, Maximum Demand and Instantaneous meters, Wattmeters, 240° meters.

Moving iron and coil meters.

# General Information

## Standards

CEI 85, EN 600051, IEC 414, VDE 0410, UNE 21318, DIN 43780, IEC51.

## Cases

- ABS & P.C material.
- Protection degree (CEI 70-1, IEC 529) IP 52 for the case.
- Protection degree (CEI 70-1, IEC 529) IP 00 for terminals.

## Accuracy class

All the instruments are manufactured in 1,0; 1,5; 2,5 accuracy class.

## Overloads

All amperometric circuits support an overload of 1,2In continuous and 10In for 5 seconds. All voltmetric circuits support an overload of 1,2Vn continuous and 2Vn for 5 seconds.

**Working voltage:** 650V

**Test voltage:** 2000V-50Hz / 60Hz, for 1 minute.

## Insulation

Insulation reference voltage 0,6 KV.

## Working temperature

20°C ( $\pm 10^\circ\text{C}$ ): working range between -25°C and + 55°C.

## Vibrations

$\pm 0.25$  mm amplitude at 50 Hz/60Hz (CEI 50-6, IEC 68-2-6).

## Humidity

Ambient relative humidity 85% without condensing, with 35°C temperature for max. 60 days per year. Yearly average humidity must not be higher than 65% (DIN 40040).

## Tropical version

95% relative humidity, for a maximum of 30 days per year.

## Mounting position

The normal execution of our instruments is for vertical mounting. If other mounting positions are known in advance, please indicate the angle of inclination when ordering.

## Scales

The full scale deflections correspond to DIN 43701.

The scale divisions correspond to DIN 43802.

## Identification signs

Signs for identification of the instrument technical characteristics

| Sign        | Description  |
|-------------|--|
|             | Electronic device in a measure circuit               |
|             | Rectifier (instrument with A.C. input).              |
|             | Shunt  |
|             | Additional resistor                                  |
|             | Zero setting device (of the field measure amplitude) |
|             | General accessories                                  |
|             | Ground terminal                                      |
|             | Positive terminal                                    |
|             | Negative terminal                                    |
| 1.0 1.5 2.5 | Accuracy in Percent %                                |

# Special Execution

## Special Executions

Tropical version  
Red stroke at any point on the scale  
Red strip on the scale  
Additional lettering  
Anti - reflection glass  
Internal illumination (when possible)  
Test voltage higher than 2000V  
Knife edge pointer and scale with mirror reading  
Red pointer adjustable from the exterior  
Scale for other ranges  
Scale with double numbering  
Scale with double stats of numbering divisions.

## Moving Iron voltmeters and ammeters

Calibration for other ranges  
Range for voltmeters differing from standard series  
Range for ammeters differing from standard series  
Ammeters with 2In - 3In - 5In overload capacity  
Two range ammeters (3 terminal (max 10A)  
Calibration for A.C. and D.C. (max 50A)  
Separate resistance for 1000V and 1500V  
Accuracy class 1 (only 50-60Hz)

## Moving coil instruments

Scale with zero point in the middle or displaced  
Range differing from standard sizes  
Two / Three / Four range voltmeters  
Two range ammeters (3 terminals)  
Adjustment to other internal resistance for ammeters  
Internal resistance for voltmeters from 1 to 600V  
 $1000\Omega/V$ ,  $4000\Omega/V$ ,  $10000\Omega/V$ ,  $20000\Omega/V$   
Separate resistor box for 1000V and 1500V  
Suppressed zero  
Accuracy class 1  
Potentiometer adjustable from the exterior (+/- 20% FSD)

## Wattmeters

Scale with zero point in the middle or displaced  
Nominal current 5 A (per element)

## Power factor meters

Non standard voltage

## Reed frequency meters

Non standard voltage

**Synchronising instruments and data available on request**

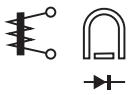

## Identification signs

Signs for identification of the instrument technical characteristics

| Sign  | Description   |
|---|---|
|  | D.C. circuit and / or measure mark which corresponds to D.C.  |
|  | A.C. circuit and / or measure mark which corresponds to A.C.  |
|  | D.C. and / or A.C. circuit and / or measure mark which corresponds to D.C. and to A. C.             |
|  | Testing voltage higher than 500V (for example 2kV)  |
|  | Instrument to be used with vertical scale   |
|  | Instrument to be used with scale inclined compared to the horizontal (for example 60°) - on request |
|  | Moving coil for D.C. instruments  |
|  | Moving Iron Instrument for A.C. Instruments   |
|  | Bimetal instrument  |
|  | Vibrating reeds instruments   |

## Ammeters - Voltmeters

For AC

90°

240°

Moving iron instruments are used for measuring AC

These will withstand the following overloads.

### Ammeters

1,2 In continuous  
10 In 5 seconds

### Voltmeters

1,2 Vn continuous  
10 Vn 5 seconds

### Consumption:

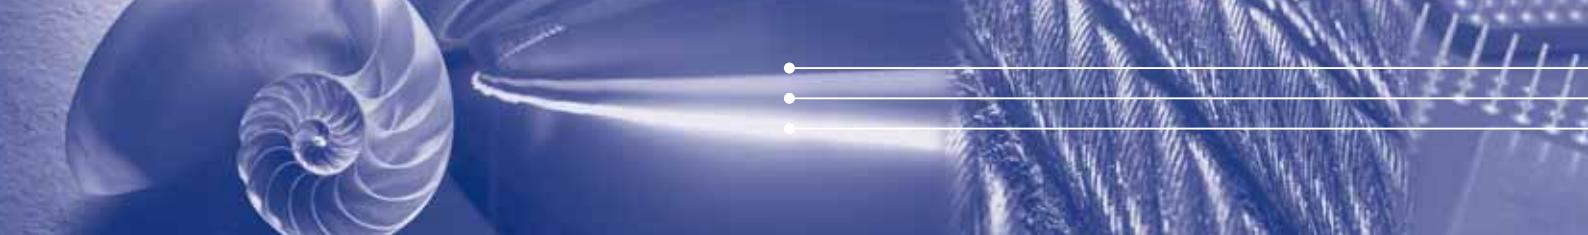

Ammeters: 0,3 - 1VA  
Voltmeters: 1 - 5VA

## Frequency Meters

BE-72/96

BE-48/72/96

### System Description (Pointer)

These are moving coil instruments with an integral electronic transducer.

### System Description (Reed)

The movement consists of a row of reeds mounted on an electromagnet. Alternating current produces an alternating magnetic field in a coil which causes the vibration of the reeds. The natural vibrating rate corresponds to the frequency of the alternating current. The vibration of the reeds is proportional to the square voltage.

**Internal Consumption:** approx. 1.5VA

## Pointer Type

| Type           | Frequency Range Hz | Voltage             |
|----------------|--------------------|---------------------|
| BE48/72/96/144 | 45 - 55Hz          | 110v-220v-380v ±15% |
| BE48/72/96/144 | 55 - 65Hz          | 110v-220v-380v ±15% |

## Reed Type

|       |         |               |                 |
|-------|---------|---------------|-----------------|
| BE-72 | 7reeds  | 1cycle / reed | 47~53Hz 57~63Hz |
| BE-96 | 11reeds | 1cycle / reed | 45~55Hz 55~65Hz |

Voltage 110V; 220V; 380V

## Power Factor Meters

### Cos ø Meters

BE /96

### System Description

This instrument is made up of an electronic circuit which supplies current to a moving coil system. The current is directly proportional to the phase out between voltage and intensity ( $\cos \phi$ ).

There are two versions: single phase and three phase balanced.

| Three or four - wire, Three Phase balanced load |    |    |
|---|----|----|
| 110V  | 5A | 1A |
| 380V  | 5A | 1A |

| Single Phase A.C. |    |    |
|-------------------|----|----|
| 110V              | 5A | 1A |
| 220V              | 5A | 1A |

# Maximum Demand Meters

## Maximum Demand Meters

These have a bimetallic measuring system. The bimetallic system drives a red pointer to mark the maximum current used. The range of the meter is 6A and 1,2A. The meter works off a-5A or -1A, C.T. with a 20% overload. The red maximum demand pointer is resetable by a manual knob which can also be sealed. The response time is 15 minutes.

**Internal Consumption: approximately 2,5VA**

## Maximum Demand & Instantaneous Meters

This meter combines a bimetallic movement with an instantaneous ammeter. The advantage of this meter is that it is possible to read both instantaneous and average current as well as the maximum demand current on one meter. The instantaneous ammeter has an overload of 100%.

**Internal Consumption: approximately 3VA**

## Electro Dynamic Wattmeters & Varmeters

Active and Reactive Power

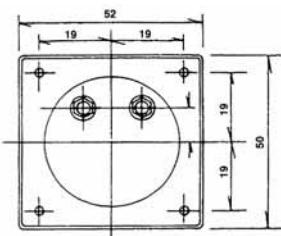

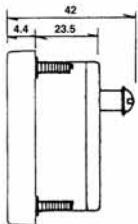

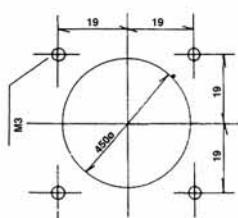

These instruments are used for measuring active and reactive power. The movement is ferrodynamic with EDDY current damping.
